

TQEMD3225V0

Ultra-low Capacitance Bidirectional Micro Packaged TVS Diodes for ESD Protection

● Description

The TQEMD3225V0 is designed to protect voltage sensitive components from ESD and transient voltage events. Excellent clamping capability, low leakage, and fast response time, make these parts ideal for ESD protection on designs where board space is at a premium.

● PIN configuration

SOD-523

● Applications

- Cellular phones
- Portable devices
- Digital cameras
- Power supplies

● Features

- Small Body Outline Dimensions
- Low Body Height
- Peak Power up to 100 Watts @8x20_s Pulse
- Low Leakage current
- Response Time is Typically < 1 ns
- IEC61000-4-2(ESD)±30kV(air),±30kV(contact)
- IEC61000-4-2 Level 4 ESD Protection
-

Application Note

Electrostatic discharge (ESD) is a major cause of failure in electronic systems. Transient Voltage Suppressors (TVS) are an ideal choice for ESD protection. They are capable of clamping the incoming transient to a low enough level such that damage to the protected semiconductor is prevented.

Surface mount TVS offers the best choice for minimal lead inductance. They serve as parallel protection elements, connected between the signal lines to ground. As the transient rises above the operating voltage of the device, the TVS becomes a low impedance path diverting the transient current to ground. The BVSEHD3125V0 is the ideal board level protection of ESD sensitive semiconductor components.

The tiny SOD-523 package allows design flexibility in the design of high density boards where the space saving is at a premium. This enables to shorten the routing and contributes to hardening against ESD.
